                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           240
```

The invention relates to an isolated nucleic acid fragment encoding a soybean myo-inositol 1-phosphate synthase, or a mutant myo-inositol 1-phosphate synthase having decreasing capacity for the synthasis for myo-inositol-1-phosphate. Also included are a chimeric gene (comprising the nucleic acid encoding soybean myo-inositol 1-phosphate synthase, its complement, subfragment or the complement of the subfragment, operably linked to suitable regulatory sequences, where expression of the chimeric gene results in a decrease in expression of an endogenous or native gene encoding a soybean myo-inositol 1-phosphate synthase), a soybean plant comprising the chimeric gene (with a heritable phenotype of a seed phytic acid content of less than 17 micromol/g, a seed content of raffinose plus

Novel isolated nucleic acid fragment encoding soybean myo-inositol phosphate synthase, useful for altering raffinose saccharide, sucrephtic acid and inorganic phosphate content of soybean seeds.

sucrose,

Novel isolated nucleic acid fragment encoding soybean myo-inositol 1-phosphate synthase, useful for altering raffinose saccharide, sucrose phytic acid and inorganic phosphate content of soybean seeds. sucrose,

Claim 3; SEQ ID NO 16; 34pp; English.

CC phosphate synthase having decreasing capacity for the synthase is tor myo-inositol-1-phosphate. Also included are a chimeric gene (comprising the CC inositol-1-phosphate. Also included are a chimeric gene (comprising the CC complement, phosphate synthase, its CC complement of the subfragment, operably CC linked to suitable regulatory sequences, where expression of the chimeric gene results in a decrease in expression of an endogenous or native gene conding a soybean myo-inositol 1-phosphate synthase), a soybean plant CC comprising the chimeric gene (with a heritable phenotype of a seed phytic CC caid content of less than 17 micromol/g, a seed content of raffinose plus stachyose of less than 18.5 micromol/g, and a seed sucrose content of CC greater than 200 micromol/g, provided that the plant is not LR33), seeds CC from the plant, making a soybean plant with the heritable phenotype (comprising crossing LR33 or the plant comprising the chimeric gene with CC an elite soybean plant and selecting a progeny plant of the cross of CC orossing step that has a heritable phenotype as mentioned above), seeds of soybean plant made by the above method, a soy protein product derived CC mutant myo-inositol 1-phosphate synthase having decreased capacity for the synthesis of myo-inositol 1-phosphate, where the gene confers a content of the synthesis of myo-inositol 1-phosphate, where the gene confers a heritable phenotype as mentioned above), and making or producing a soybean protein product derived from seeds of a soybean plant with heritable phenotype as mentioned above. The nucleic acid is useful for altering raffinose saccharide, sucrose, phytic acid and inorganic phosphate content of soybean seeds thus leading to valuable and useful soybean products, since the presence of high concentration of raffinose oligosaccharides in soy plants (and other legumes) can lead to flatulence when consumed by humans. The present sequence represents a wild-type myo-The invention relates to an isolated nucleic acid fragment encoding sovbean myo-inositol 1-phosphate synthase, or a mutant myo-inositol soybean myo-inositol 1-phosphate synthase, or a mutant myo-inose phosphate synthase having decreasing capacity for the synthesis inositol 1-phosphate synthase.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              뮻
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                뫄
This is the amino acid sequence of soybean myo-inositol 1-phosphate synthase (MI 1-PS) deduced from the coding region of an isolated cDNA clone (see AAV62440). MI 1-PS is involved in glucose metabolism to phytic acid, raffinose and stachyose. A mutant MI 1-PS (see AAW79741) has been identified in soybean line LR33, a mutagenised line of low raffinose saccharide phenotype. Sequencing revealed a single base change mutation in the LR33 gene sequence that resulted in a K396N substitution in the
                                                                                                                                                                                                                                                                                    Soybean plants containing altered myo-inositol-1-phosphate gene - for generating plants with altered levels of e.g. raffinose, stack phytic acid, etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Glycine max;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Soybean; myo-inositol

The mutation results in a seed phenotype of very low raffinose saccharide sugars, very high sucrose and low phytic acid. The mutated nucleic acid is used to alter the raffinose saccharide, sucrose, phytic acid and inorganic phosphate content of soybean seeds, leading to useful soybean products, e.g. a seed phytic acid content of less than 17 ug/g, and a seed sucrose and stachyose combined of less than 14.5 ug/g, and a seed sucrose content greater than 200 ug/g.                                                                                                                                                                                                                                                                                                                        밁
                                                                                                                                                                                                                                                                                                                                                 á
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a nucleic acid fragment encoding a soybean myo-
CC inositol 1-phosphate synthase or a mutant myo-inositol 1-phosphate
CC synthase having a decreased capacity for the synthesis of myo-inositol 1-
CC phosphate. The invention also relates to a chimeric gene operably linked
CC to suitable regulatory sequences, where expression of the chimeric gene
CC results in a decrease in expression of an endogenous or native gene
CC encoding a soybean myo-inositol 1-phosphate synthase, a soybean plant
CC comprising the chimeric gene, a method of making the soybean plant a
CC seed of the soybean plant, a soy protein product derived from the
CC protein product and a method of using a soybean plant homozygous for at
CC least one gene encoding a mutant myo-inositol 1-phosphate synthase having
CC decreased capacity for the synthesis of myo-inositol 1-phosphate. The
CC decreased raffinose, stachyose and phytic acid content and increased
CC sucrose and inorganic phosphate content, leading to valuable and useful
CC soybean products. This sequence represents a mutant soybean myo-inositol
CC 1-phosphate synthase polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    5
The invention relates to a nucleic acid fragment encoding a soybean myo-
CC inositol 1-phosphate synthase or a mutant myo-inositol 1-phosphate
CC synthase having a decreased capacity for the synthesis of myo-inositol 1-
CC phosphate. The invention also relates to a chimeric gene operably linked
CC to suitable regulatory sequences, where expression of the chimeric gene
CC results in a decrease in expression of an endogenous or native gene
CC encoding a soybean myo-inositol 1-phosphate synthase, a soybean plant
CC comprising the chimeric gene, a method of making the soybean plant, a
CC seed of the soybean plant, a soy protein product derived from the
CC processing of soybean seeds, a method of making or producing a soy
CC protein product and a method of using a soybean plant homozygous for at
CC least one gene encoding a mutant myo-inositol 1-phosphate synthase having
CC decreased capacity for the synthesis of myo-inositol 1-phosphate. The
CC nucleic acid fragment and methods are useful for producing plants with
CC concressed raffinose, stachyose and phytic acid content and increased
CC soybean products. This sequence represents a wild type soybean myo-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        07-APR-1998;

of the

invention

Novel isolated nucleic acid fragment encoding soybean myo-inositol phosphate synthase, useful for altering raffinose saccharide, sucrephytic acid and inorganic phosphate content of soybean seeds.

NO 10;

Complement, subfragment or the complement of the subfragment, operably complement, subfragment or the complement of the subfragment, operably complement, subfragment or the complement of the subfragment, operably complement, subfragment or the complement of the subfragment, operably complement, subfragment or the complement of the subfragment, operably complement, subfragment or the subfragment of the chimeric gene results in a decrease in expression of an endogenous or native gene encoding a soybean plant comprising the chimeric gene (with a heritable phenotype of a seed phytic acid content of less than 14.5 micromol/g, aseed content of raffinose plus stachyose of less than 17 micromol/g, and a seed sucrose content of comprising the plant, making a soybean plant with the heritable phenotype (comprising crossing LR33 or the plant comprising the chimeric gene with an elite soybean plant and selecting a progeny plant of the cross of crossing step that has a heritable phenotype as mentioned above), seeds of soybean plant made by the above method, a soy protein product derived from seeds of a soybean plant (homozygous for one or more gene encoding a complement product derived from seeds of a soybean plant with heritable phenotype as mentioned above. The nucleic acid is useful for compression products, since the presence of high concentration of raffinose oligosaccharides in soy plants (and other legumes) can lead to flatulence when consumed by humans. The present sequence represents a wild-type myonosical represents sequence represents a wild-type myonosical represents sequence represents a wild-type myonosical represents sequence represents a wild-type myonosical sequence represents a soybean myo-inositol 1-phosphate synthase, or a mutant myo-inositol phosphate synthase having decreasing capacity for the synthesis for inositol-1-phosphate. Also included are a chimeric gene (comprising inositol 1-phosphate synthase. invention relates to an isolated nucleic acid fragment encoding bean myo-inositol 1-phosphate synthase, or a mutant myo-inositol ding a sitol 1-for myo-sing the

AC 
                    CC The invention relates to an isolated nucleic acid fragment encoding a CC soybean myo-inositol 1-phosphate synthase, or a mutant myo-inositol 1-CC phosphate synthase having decreasing capacity for the synthesis for myo-CC inositol-1-phosphate. Also included are a chimeric gene (comprising the CC nucleic acid encoding soybean myo-inositol 1-phosphate synthase, its CC complement, subfragment or the complement of the subfragment, operably CC linked to suitable regulatory sequences, where expression of the chimeric gene results in a decrease in expression of an endogenous or native gene ce encoding a soybean myo-inositol 1-phosphate synthase), a soybean plant CC comprising the chimeric gene (with a heritable phenotype of a seed phytic cardicontent of less than 17 micromol/g, as seed content of raffinose plus stachyose of less than 17 micromol/g, and a seed sucrose content of content of less than 18 micromol/g, and a seed sucrose content of content of seed phytic cardicontent of less than 19 micromol/g, and a seed sucrose content of content of seed phytic cardicontent of content of less than 19 micromol/g, and a seed sucrose content of content of less than 19 micromol/g, and a seed sucrose content of content of less than 19 micromol/g, and a seed sucrose content of content of less than 19 micromol/g, and a seed sucrose content of content of less than 19 micromol/g, and a seed sucrose content of content of less than 19 micromol/g, and a seed sucrose content of content of less than 19 micromol/g, and a seed sucrose content of content of less than 19 micromol/g, and a seed sucrose content of content of the cross of content of less than 19 micromol/g, and a seed sucrose content of content of the cross of content of less than 19 micromol/g, and a seed sucrose content of the cross of content of less than 19 micromol/g, and a seed content of the cross of content of less than 19 micromol/g, and seed sucrose content of the cross of content of less than 19 micromol/g, and a soy protein product derived content of the cross o
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            문
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            र्
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel isolated nucleic acid fragment encoding soybean myo-inositol phosphate synthase, useful for altering raffinose saccharide, sucrophytic acid and inorganic phosphate content of soybean seeds.

```
CC This is the amino acid sequence of a mutant soybean myo-inositol 1-CC phosphate synthase (MI 1-PS) deduced from the coding region of an CC isolated CDNA clone (see AAV62443). MI 1-PS is involved in glucose CC metabolism to phytic acid, raffinose and stachyose. The MI 1-PS was CC identified in soybean line LR33, a mutagenised line of low raffinose CC saccharide phenotype. Sequencing revealed a single base change mutation in the LR33 gene sequence that resulted in a K396N substitution in the LR33 gene sequence that resulted in a K396N substitution in the CC results in a seed phenotype of very low raffinose saccharide sugars, very CC high sucrose and low phytic acid. The mutated nucleic acid is used to CC alter the raffinose saccharide, sucrose, phytic acid and inorganic CC phosphate content of soybean seeds, leading to useful soybean products, CC e.g. a seed phytic acid content of less than 17 ug/g, a seed content of sucrose content greater than 200 ug/g. (Updated on 17-OCT-2003 to CC standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Matches

The invention relates to a nucleic acid fragment encoding a soybean myo-
cc inositol 1-phosphate synthase or a mutant myo-inositol 1-phosphate
cc synthase having a decreased capacity for the synthesis of myo-inositol 1-
cc phosphate. The invention also relates to a chimeric gene operably linked
cc results in a decrease in expression of an endogenous or native gene
cc encoding a soybean myo-inositol 1-phosphate synthase, a soybean plant
cc comprising the chimeric gene, a method of making the soybean plant, a
cc seed of the soybean seeds, a method of making the soybean plant, a
cc seed of the soybean seeds, a method of finaling or producing a soy
cc protein product and a method of using a soybean plant homozygous for at
cleast one gene encoding a mutant myo-inositol 1-phosphate synthase having
cc encased capacity for the synthesis of myo-inositol 1-phosphate with
cc nucleic acid fragment and methods are useful for producing plants with
cc sucrose and inorganic phosphate content, leading to valuable and useful
cc soybean products. This sequence represents a mutant soybean myo-inositol
cc 1-phosphate synthase polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    08-APR-1997;

GENERAL INFORMATION:

APPLICANT: Keith Weinstock et al

APPLICANT: Keith Weinstock et al

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO CANDIDA ALBICANS

TITLE OF INVENTION: FOR DIAGNOSTICS AND THERAPEUTICS

FILE REFERENCE: 107196.132

CURRENT APPLICATION NUMBER: US/09/248,796A

CURRENT FILING DATE: 1999-02-12

PRIOR APPLICATION NUMBER: US 60/074,725

PRIOR APPLICATION NUMBER: US 60/074,725

PRIOR APPLICATION NUMBER: US 60/096,409

PRIOR FILING DATE: 1998-08-13

NUMBER OF SEQ ID NOS: 28208

SEQ ID NO 3131

LENGTH: 1578
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

Sequence 34, Application US/09397787

Patent No. 6468758

GENERAL INFORMATION:
APPLICANT: Benson, Darin R.
APPLICANT: Mitcham, Jennifer L.
APPLICANT: Mitcham, Jennifer L.
APPLICANT: King, Gordon E.
APPLICANT: King, Gordon E.
TITLE OF INVENTION: COMPOSITIONS AND METHODS FOR OVARIAN
TITLE OF INVENTION: CANCER THERAPY AND DIAGNOSIS
FILE REFERENCE: 210121.466C2
CURRENT APPLICATION NUMBER: US/09/397,787
CURRENT PILING DATE: 1999-09-16
NUMBER OF SEQ ID NOS: 334
SOPTWARE: PastSEQ for Windows Version 3.0
SEQ ID NO 34
LENGTH: 1231
TYPE: DNA
